Arsenic

A. Hazard

- 1. At NNS, exposure monitoring results have indicated a potential for inorganic arsenic levels to exceed the applicable OSHA exposure limits during abrasive blasting in enclosed and confined spaces.
- 2. Contractors shall ensure that their personnel are not exposed to inorganic arsenic over the applicable OSHA levels.

B. Regulations & Requirements

- 1. Where there is potential for personnel exposure to inorganic arsenic, OSHA requires each employer to determine the extent of exposure. If airborne exposures are above the action level (5 μ g/m3), OSHA requires the employer to establish and implement a written compliance program and comply with other requirements of 29 CFR 1910.1018.
- 2. During the NNS pre-approval process (see General Information) each contractor whose employees may be exposed to arsenic above the action level (5 μg/m3), must provide to the NNS Environmental, Health and Safety Department a copy of that contractor's written Arsenic Program. This document must describe the contractor's program for complying with each element of the applicable OSHA standard(s). The contractor shall provide a copy of any changes to the program on an annual basis, such as at the beginning of each year.
- 3. The employer shall ensure that unprotected personnel will not be exposed to airborne levels of arsenic above the action level.
