

Warrior Preparation Center

Guten tag (Good day). I am Al Hunt, Huntington Ingalls Industries' Site Lead at the Warrior Preparation Center, otherwise known as the WPC, in Einsiedlerhof, Germany, approximately 10 minutes from Ramstein Air Base. HII is proud to team with the WPC to enhance warfighting readiness. Let's go see how...

Since 2016, the HII WPC team has planned and executed more than 400 exercises and training events involving 2500-plus trainees in over 40 countries.

As the WPC's prime contractor in United States Air Forces Europe, HII advances the diverse missions of many of the center's various organizations.

Our team of more than 80 technical experts develop, plan, and execute live, virtual, constructive classified and unclassified exercises and training events. These activities ensure a growing number of participating NATO air, ground and naval forces as well as other military units in the U.S., Europe, Africa and the Pacific stay ahead of today's adversaries.

The WPC HII team is comprised of highly certified IT support that enables our modeling and simulation personnel to test and operate their sophisticated software tools to support exercises and training events. This allows operations experts to replicate realistic threat scenarios and safely push training audiences to their limits in a controlled environment.

To facilitate coordinated military action, our live, virtual, constructive integrators provide the critical link necessary to enable the transition from stand-alone to distributed training environments hosted by the WPC.

Leveraging technology and ingenuity, we deliver the technical support critical to the WPC communications and network infrastructure – the backbone for live, synthetic, blended environments.

And our commitment to educate and train using the most current technology and information available enhances warfighting readiness. Huntington Ingalls Industries is the American military's premiere ship builder...but we do a whole lot more.

We're proud to be part of a team dedicated to protecting our national security and the interests of our allies and partners. HII's work at the WPC is Definitely Hard Stuff Done Right!
