

United States Department of Energy

The Secretary of Energy Achievement Award

Presented to the

National Research Universal (NRU) and National Research Experimental (NRX) HEU Removal Team

In recognition of the exceptional achievement in completing a multi-year effort to transport highly enriched uranium (HEU) spent nuclear fuel (SNF) from the National Research Universal (NRU) and National Research Experimental (NRX) reactors located at the Chalk River Laboratories, Ontario, Canada to the Department of Energy's (DOE) Savannah River Site in the United States. The NRU/NRX HEU transfer, completed in 2019, was the largest SNF transfer to the United States in the history of DOE's National Nuclear Security Administration's Nuclear Material Removal Program. Expertly coordinated among more than a dozen organizations in Canada and the United States, including multiple Federal, state and tribal partners, the effort involved 56 total truck shipments covering more than 66,000 miles during the four-year campaign, and yielded a significant net reduction in worldwide HEU holdings.

For their contributions to the Department of Energy and the Nation, the NRU/NRX HEU Removal Team is awarded the Secretary of Energy's Achievement Award.
