The Importance of COVID-19 Vaccines

McKinley Price
Newport News, Virginia mayor and dentist

Let's think of it like you're wearing a seat belt in a car. You wear it because, in case you do get hit, you will be safe. Same thing with the vaccine. And this will keep you out of the hospital, will keep you off a respirator and it is shown to keep you from dying.

So it is proven, since we've had millions of people to get vaccinated, that it is very safe. Well it's important to save lives, for us to give back economically where we once were, and it's important for us to be able to send our kids back to school safely.

Well, I personally have lost friends, several friends and colleagues from this. And you know, when you see that something possibly now has been created to stop this from happening, when you know that only 99% of the people who are getting this disease that are dying are those that are not vaccinated. To me that's the most obvious reason to do this.

Stay safe, get vaccinated and stay out of the hospital.
